

Coconut Manuring Tips

1. Circular basins of 1.8 m radius and 25 cm depth may be dug during end of August and FYM can be applied @ 50 kg FYM/adult palm
2. 500 gm N, 320 gm P and 1200 gm K per palm per year is generally recommended for adult plantations
3. Two thirds of fertilizer can be applied over the FYM and covered
4. To supply two thirds of this nutrients 0.67kg urea, 1kg Rock phosphate and 1.35 kg MOP needs to be applied
5. Wherever Boron deficiency is noticed, 100 gm Borax can be applied per palm
6. It is always advisable to test the soil once in 2-3 years based on which fertilizer quantity can be adjusted
